

THE FUTURE OF MALL AUDIENCE ANALYTICS

You already count your visitors. Now see who they are, and what they leave with.

We describe every shopper across **88+ visual attributes**, group your visitors into audiences and show when each one comes and how many visits end with a purchase.

🛡️ **Privacy by design** · no facial recognition, no identities, aggregates only

01 · WHAT YOU DECIDE EVERY YEAR

Three decisions that shape your center, made today on how many, not on who.

01

Tenant mix and leasing

Which tenants fit the people who actually walk in? What evidence do you bring to a renewal, a relocation or a new lease?

Today: door counts, periodic surveys, tenant sales.

02

Programming and marketing

Which events, campaigns and weekend activations bring the audiences you want, and at what time do those audiences arrive?

Today: traffic before and after, and experience.

03

Pricing space and media

What is an entrance, a promo zone or a screen worth, based on who passes it rather than only how many?

Today: footfall per entrance, sold as volume.

THE SHIFT

Footfall already underpins how your assets are valued and marketed. **The next question is not how many people came. It is who they were.**

02 · WHY TODAY'S SOURCES DON'T ANSWER THEM

Your data is good.
It just answers different questions.

	How many	Where from	How much spent	Who they are	What they leave with
Footfall counters sensors at the doors	 entries per door	 not covered	 not covered	 basic age and gender, at best	 not covered
Mobile network data telco location panels	 estimated from a panel	 home and work areas	 not covered	 subscriber profile, coarse	 not covered
Card transaction data payment networks and banks	 card payers only	 cardholder area	 amount by category	 no visual layer	 card payments only
Minds & Models next gen mall analytics	 every valid entry	 joins your telco data	 joins your card data	 88+ attributes per visit	 share of visits with a purchase

NOT A REPLACEMENT

We do not replace these sources. We add the layer none of them can see: **who is walking through your entrance**, described without identifying anyone, and joinable with the data you already buy.

Minds & Models

03 · THE AUDIENCES

Behind the average visitor are eight audiences, each with its own rhythm and basket.

Who and when What we see How they shop

LANDLORD KPI

Target-audience share of visits, per entrance, per week

e.g. Polished Professionals 7.2% of visits, weekends -34%

TENANT KPI

Purchase rate of the core audiences

e.g. Mainstream Adults 38% vs Teens in Streetwear 19%

Next generation, AI-first platform.

Ask a question instead of waiting for a dashboard.

MARKETING LEAD

✦ Which audience fills Saturday afternoons at **Dubai Mall**?

› Plan the next activation around the audience that already comes.

LEASING MANAGER

✦ Who comes through the side entrance, and what do they carry out?

› Bring audience evidence to the next lease conversation.

CENTER MANAGER

✦ On which days do **Parents with Children** arrive, and when?

› Staff and program for the families you actually get.

**Dashboards if you want them, never a bottleneck**

Reports and dashboards are there, and we build custom views on request. Your team simply never has to wait for one: ask, and get the answer and the chart.

**Integrates with anything**

Clean data into your warehouse or BI tool via API, next to the mobile and card data you already buy.

**One interface for every center**

The same questions work across your whole portfolio.

Turn audience data into KPIs you manage and improve.

KPI	What it measures	What it moves	Owner
Target-audience share	Share of visits from the audiences your strategy targets, per center and month	Tenant mix, marketing	Leasing, marketing
Activation audience lift	Change in target-audience visits during an event or campaign vs its baseline	Programming, campaign spend	Marketing
Audience reach per entrance and screen	Weekly reach of each audience at every entrance, promo zone and screen	Media and space pricing	Commercial
Purchase rate by audience	Share of visits that end with a purchase, per audience and center	Tenant mix, promotions	Leasing, tenants
Tenant data revenue	Revenue from audience reports and benchmarks sold to tenants	A new revenue line	Commercial

MONETIZE WITH YOUR TENANTS

Offer tenants audience reports for their storefront and category, with benchmarks against the center. **Data your cameras already collect becomes a paid tenant service.**

LIKE FOR LIKE ACROSS THE PORTFOLIO

The same KPI definitions in every center, from one platform. **Compare centers directly, with no reconciling of legacy counters from different vendors.**

We understand every visitor without identifying anyone.

No faces, no identities

No facial recognition and no biometric templates.
Visits cannot be linked or re-identified.

Aggregates only

Every output describes at least 25 people. No number
ever points to an individual.

GDPR certified and audited

Independently audited and GDPR certified. We work
through your data processing agreement and impact
assessment with your legal team.

All analysis runs without facial recognition or biometric templates. Visits cannot be linked or re-identified. All outputs are aggregated (minimum 25 persons per segment).

Start with one center.

Grow into the future of mall audience analytics.

1

Pilot

ONE CENTER

- Cameras at your main entrances
- AI chat and live dashboard from day one
- A report with your audiences, time patterns and purchase signal

2

Compare centers

A FEW CENTERS

- The same metrics side by side
- Ideally across a peak season
- Matched to your own segments and KPIs

3

Portfolio rollout

IN WAVES

- Entrances and tenant storefronts where you need them
- Data into your systems via API
- One view across the whole portfolio
