

● A data partnership for retail

Your stores already generate the data. We let you earn from it.

We help you capture and analyze the data your stores produce every day. And we open a new revenue line that brands pay for, not you.

🛡️ Free forever · Zero risk to you

📈 A new product at 100% margin

01 · THE OFFER IN ONE SENTENCE

We turn your shopper data into new revenue for you.

You pay nothing and risk nothing. We are looking for a founding retail partner, not a customer. We would like it to be you.

YOUR INVESTMENT

€0

Who walks in, not how many

A counter at the door gives you a number. We read the brands they wear, the watch they train with, the stroller they push, the trip they are on, and match it to what they actually bought. **88+ details per shopper, on every visit.** Observed, not surveyed. No panel, no recall.

THE SHOPPERS IT FINDS IN YOUR STORES

@Dawn Trades

@Gym Regular

@Office Professional

@Value Senior

Segments the data finds by itself. Nobody writes them.

PER YEAR · NETWORK POTENTIAL

Up to €100k+

A new revenue line

Brands pay for shopper insight in the categories you sell. Revenue from insight tied to your network goes to you, and it grows with the number of stores and categories you bring in.

The same profit as **€4M** of extra merchandise turnover, with no cost of goods, stock, write-offs or logistics. **Modeled on FMCG**, we are happy to work through the numbers for other retail segments.

One founding partner per category, so the insight carries statistical weight for brands. That partner helps shape the product and gets terms that will not be repeated. Your category is still open.

The worked example above: one chain, roughly 50 stores, 3 to 4 licensed categories, modeled on FMCG. Data revenue about €1,200 per store per year; at a 1.5% net retail margin that equals the profit on €4M of merchandise turnover. The real figure depends on how many stores and categories join and on brand demand.

Two data sources you already own. We join them and monetize them.

Visitor data and POS data sit apart today and neither of them earns anything. Only once they are joined does insight appear that brands will pay for.

03 · THE PRODUCT, RUNNING TODAY

This is not a roadmap. It is live, and you can try it now.

The same interface your team would get. You ask in plain language and the answer comes back from real shoppers matched to real receipts, not from a panel or a projection.

CATEGORY MANAGER

“Do my two energy-drink suppliers bring the same shopper?”

OWN-BRAND LEAD

“When private label wins, whose shopper did I take?”

Ask anything, or @ a segment to name who you mean

Ask @Dawn Trades

Ask #energy drinks

Ask #the station site

Ask @Gym Regular

Ask #private label

Segments are discovered in the data, not authored by a marketer.

COMMERCIAL DIRECTOR

“Who is in my stores at 6am, and which brand would pay for them?”

TRY IT chat.mindsmodels.ai/retailer →

04 · WHO PAYS

Brands need this data and have budgets ready for it.

These companies already spend heavily on shopper data elsewhere. Your stores produce exactly that data every day and throw it away. We turn it into a product they can buy, and you take a share of what they pay for it, at no cost to you.

WHO WOULD BE INTERESTED

Food and beverages	Nestlé, Coca-Cola, Kofola
Household and personal care	P&G, Henkel, Unilever
Beauty and cosmetics	L'Oréal, Beiersdorf
Fashion and footwear	Levi's, Tommy Hilfiger, Puma
Sports and outdoor	Adidas, Salomon, The North Face
Electronics and home	Samsung, Philips, Bosch

An illustrative list across retail segments. Demand for shopper data is not limited to FMCG. These are not existing customers.

WHAT STAYS YOURS

- ✓ **Your data stays yours.** Both the video record and the POS data are and remain yours.
- ✓ Brands are licensed **only anonymized, aggregated insight**, and only to the extent you approve.
- ✓ **You approve what is shared from your network.**
- ✓ Revenue grows with the number of categories and stores you bring in.

05 · WHY NOT THE ALTERNATIVES

You have been sold shopper data before. **None of it pays you.**

Every one of these already exists in retail. Every one of them takes money out of your budget and gives you a fraction of the picture.

	WHO THE SHOPPER IS	WHAT THEY BOUGHT	COSTS YOU NOTHING	PAYS YOU
Footfall counting ShopperTrak, Xovis and similar	✗ a count, maybe a guess at age	✗ no link to the receipt	✗ subscription	✗ never
Syndicated POS panels NielsenIQ, Circana and similar	✗ no visual layer	✓ receipts	✗ barter, or a fee	✗ never
Your loyalty program your own CRM	— members who scanned	— members only	✗ you run the scheme	✗ never
Building retail media yourself the dunnhumby route	— if you build it	✓ your own POS data	✗ team, tech, years	— eventually
Minds & Models	✓ 88+ attributes per visit	✓ every receipt, matched	✓ zero, forever	✓ share of what brands pay

Everything else was built for a retailer who pays for data. This was built for one who gets paid for it.

06 · FOUNDING PARTNERS

A concept proven in other retail categories. Now open for yours.

In every category we work with a single founding partner, so the data carries statistical weight for brands. Being one of the first partners means you help shape the product and get terms that will not be repeated later.

07 · START SMALL

Three steps. **We start small.**

1

Sign a short pilot agreement

Revocable, about 60 days, no long-term commitment. Nothing is sold or shared beyond the pilot. We would start with the part of your network you recommend as the best fit.

2

Pilot across a few dozen stores

No setup cost and no load on your IT. Full support from us, live in weeks. You see the data first, before anyone else does.

3

Scale at your pace, revenue on top

It scales as you choose. Data revenue starts as soon as brands begin licensing your insight.

WHY THIS IS WORTH DOING NOW

No retail chain has this layer of data today. In every category we work with a single founding partner, so the data carries statistical weight. **The early partners help shape the product and get terms that will not be repeated later.**
