

● A data partnership for retail

Your stores already generate the data. We let you earn from it.

We help you capture and analyze the data your stores produce every day. And we open a new revenue line that brands pay for, not you.

🛡️ Free forever · Zero risk to you

📈 A new product at 100% margin

01 · THE OFFER IN ONE SENTENCE

We turn your shopper data into new revenue for you.

You pay nothing and risk nothing. We are looking for the first retail chain to try this as a partner, not as a customer. We would like it to be yours.

YOUR INVESTMENT

€0

Free data, forever

You see who walks in, when, how often and what they actually buy. Your team has it from day one, whatever happens with anything else.

PER YEAR · NETWORK POTENTIAL

Up to €100k+

A new revenue line

Brands pay for shopper insight in the categories you sell. Revenue from insight tied to your network goes to you. The actual figure grows with the number of stores and categories you bring in.

The same profit as **€4M** of extra merchandise turnover. Data revenue carries no cost of goods, stock, write-offs or logistics. **Modeled on FMCG**, we are happy to work through the numbers for other retail segments.

YOUR CATEGORY · ONE PARTNER

A unique offer

An exclusive category position

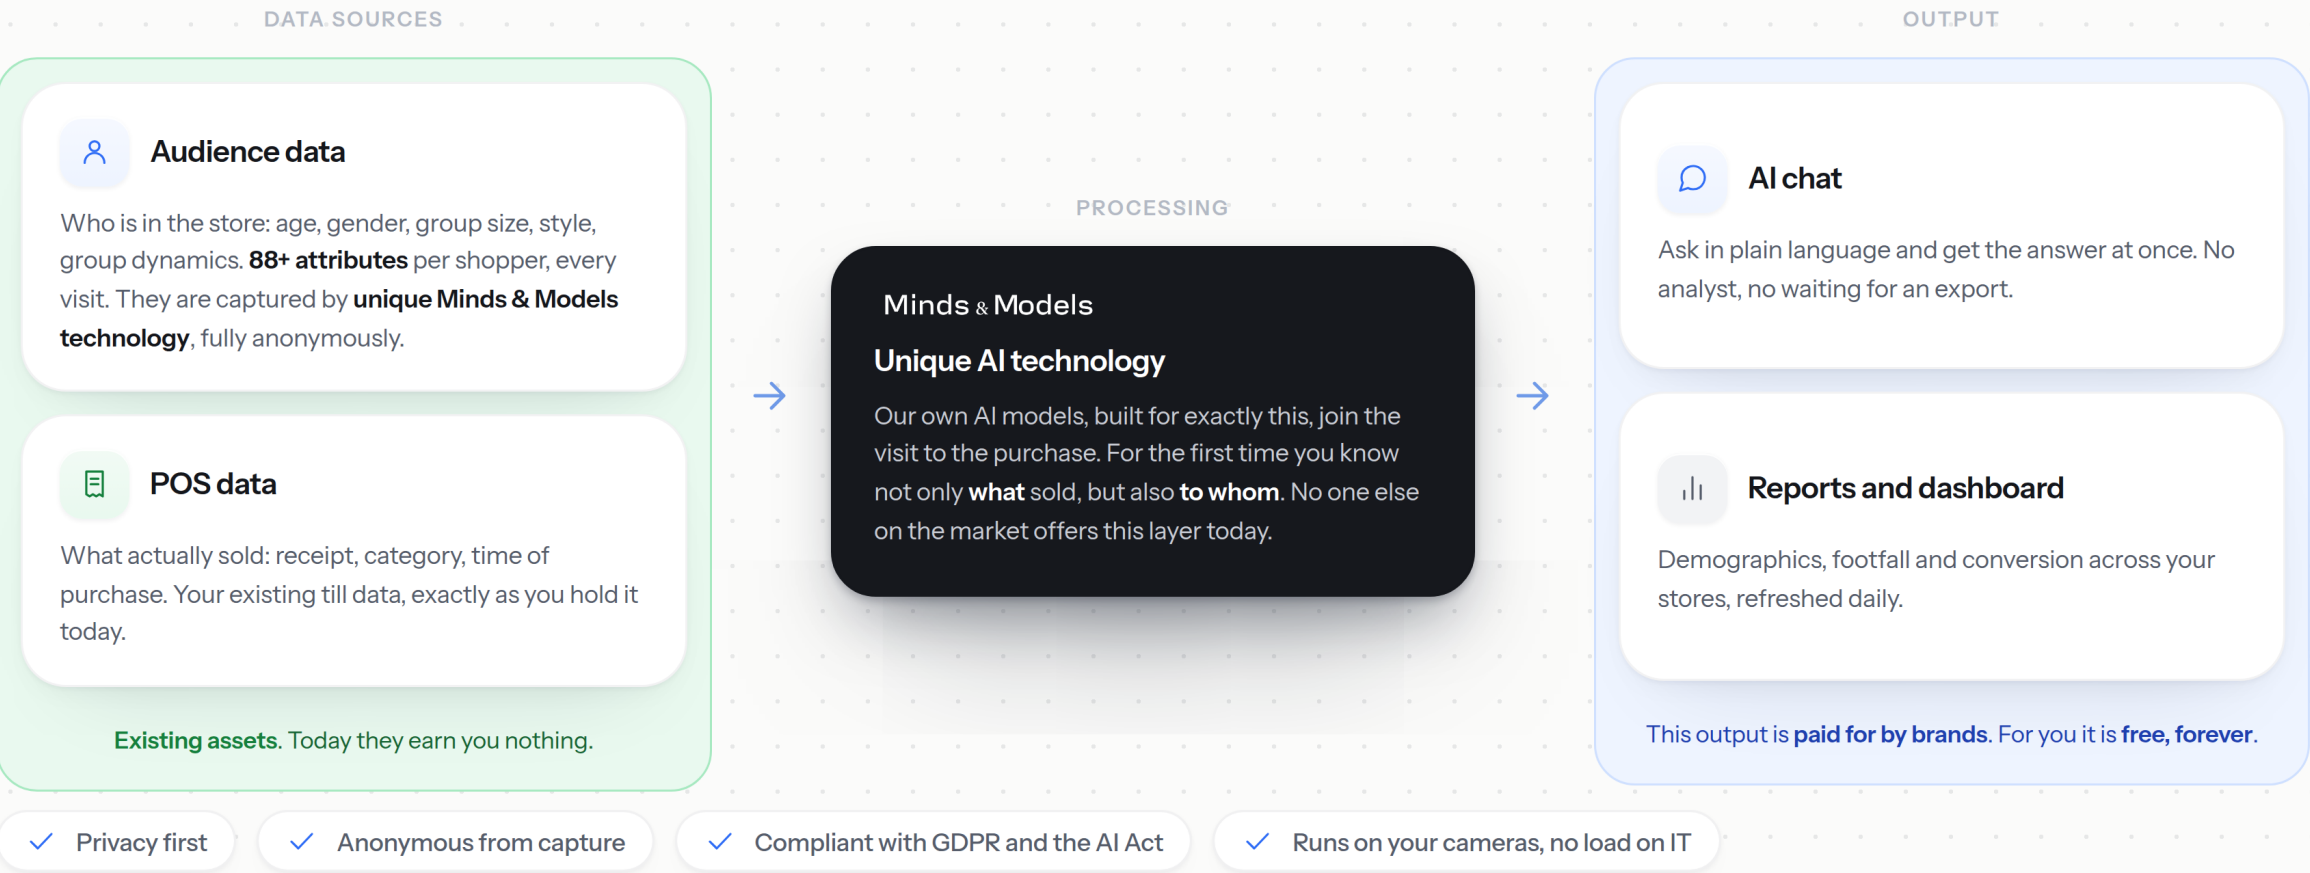

In your category we work with a single chain, so the insight carries statistical weight for brands. That chain helps shape the product and gets terms that will not be repeated.

WHAT THE WORKED EXAMPLE ASSUMES

A worked example, not an offer. One chain, roughly **50 stores, 3 to 4 licensed categories** (modeled on FMCG). Data revenue about **€1,200 per store per year**; at a 1.5% net retail margin that equals the profit on €4M of merchandise turnover. The real figure depends on how many stores and categories join and on brand demand. We are happy to rerun the model on your numbers.

Two data sources you already own. We join them and monetize them.

Visitor data and till data sit apart today and neither of them earns anything. Only once they are joined does insight appear that brands will pay for.

Brands need this data and have budgets ready for it.

These companies already spend heavily on shopper data elsewhere. The platform connects you to that demand and the revenue goes to you, without you paying anyone anything.

WHO WOULD BE INTERESTED

Food and beverages	Nestlé, Coca-Cola, Kofola
Household and personal care	P&G, Henkel, Unilever
Beauty and cosmetics	L'Oréal, Beiersdorf
Fashion and footwear	Levi's, Tommy Hilfiger, Puma
Sports and outdoor	Adidas, Salomon, The North Face
Electronics and home	Samsung, Philips, Bosch

An illustrative list across retail segments. Demand for shopper data is not limited to FMCG. These are not existing customers.

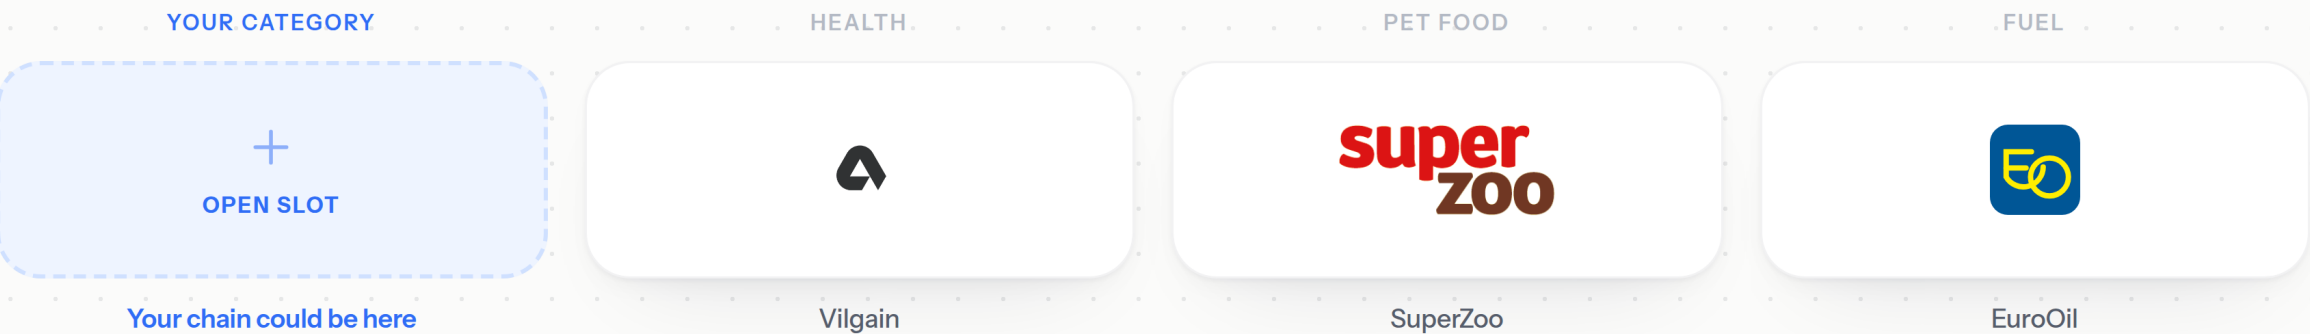

WHAT STAYS YOURS

- ✓ **Your data stays yours.** Both the video record and the till data are and remain yours.
- ✓ Brands are licensed **only anonymized, aggregated insight**, and only to the extent you approve.
- ✓ **You approve what is shared from your network.**
- ✓ Revenue grows with the number of categories and stores you bring in.

04 · FOUNDING PARTNERS

A concept proven in other retail categories. **Now open for yours.**

In every category we keep only a limited number of founding partnerships, so the data carries statistical weight. Whoever is first in a category helps shape the product and gets terms that will not be repeated later.

05 · START SMALL

Three steps. **We start small.**

1

Sign a short pilot agreement

Revocable, about 60 days, no long-term commitment. Nothing is sold or shared beyond the pilot. We would start with the part of your network you recommend as the best fit.

2

Pilot across a few dozen stores

No setup cost and no load on your IT. Full support from us, live in weeks. You see the data first, before anyone else does.

3

Scale at your pace, revenue on top

It scales as you choose. Data revenue starts as soon as brands begin licensing your insight.

WHY THIS IS WORTH DOING NOW

No retail chain has this layer of data today. In every category we keep only a limited number of founding partnerships, so the data carries statistical weight. **Whoever joins first helps shape the product and gets terms that will not be repeated later.**
