

THE FUTURE OF MALL AUDIENCE ANALYTICS

# You already count your visitors. Now see who they are, and what they leave with.

One camera per entrance describes every visit across **88+ visual attributes**, groups your visitors into audiences and shows when each one comes and how many visits end with a purchase. Your team simply asks, in plain language.

🛡️ **Privacy by design** · no facial recognition, no identities, aggregates only

## Three decisions that shape your centre, made today on how many, not on who.

01

### Tenant mix and leasing

Which tenants fit the people who actually walk in? What evidence do you bring to a renewal, a relocation or a new lease?

**Today:** door counts, periodic surveys, tenant sales.

02

### Programming and marketing

Which events, campaigns and weekend activations bring the audiences you want, and at what time do those audiences arrive?

**Today:** traffic before and after, and experience.

03

### Pricing space and media

What is an entrance, a promo zone or a screen worth, based on who passes it rather than only how many?

**Today:** footfall per entrance, sold as volume.

#### THE SHIFT

Footfall already underpins how your assets are valued and marketed. **The next question is not how many people came. It is who they were.**

Your data is good.  
It just answers different questions.

| SOURCE                                                     | HOW MANY  | WHERE FROM | HOW MUCH SPENT | WHO THEY ARE                  | WHAT THEY LEAVE WITH |
|------------------------------------------------------------|-----------|------------|----------------|-------------------------------|----------------------|
| <b>Footfall counters</b><br>sensors at the doors           | ✓         | —          | —              | basic age and gender, at best | —                    |
| <b>Mobile network data</b><br>telco location panels        | estimated | ✓          | —              | subscriber profile, coarse    | —                    |
| <b>Card transaction data</b><br>payment networks and banks | —         | partly     | ✓              | —                             | card payers only     |
| <b>Minds &amp; Models</b><br>one camera per entrance       | ✓         | —          | —              | ✓                             | ✓                    |

NOT A REPLACEMENT

We do not replace these sources. We add the layer none of them can see: **the person walking through your entrance**, described without identifying anyone, and joinable with the data you already buy.

One camera per entrance.  
Every visit described, no one identified.

What every visit turns into

|                    |                                                                                      |
|--------------------|--------------------------------------------------------------------------------------|
| Capture            | every valid entry at the instrumented entrances                                      |
| Visual description | 88+ attributes per visit: age band, style, brands worn, company, items carried       |
| Audiences          | a model groups the attributes into distinct personas, each with its own time pattern |
| Purchase signal    | share of visits that end with a purchase in hand: bags, carts, boxes                 |
| Quality            | staff filtered out, only valid entries, every number traceable                       |
| Delivery           | AI chat and live dashboard, plus data into your own systems                          |

88+

VISUAL ATTRIBUTES PER VISIT  
from a vocabulary of 450+ detectable details

0

IT PROJECTS ON YOUR SIDE  
a device, a power socket and wifi at each entrance

25+

PEOPLE BEHIND EVERY NUMBER  
aggregates only, never an individual

04 · WHO WALKS IN

Weekends bring 22% more visitors,  
and two thirds of them are aged 20 to 49.

+22%

VISITORS PER DAY, WEEKEND VS WEEKDAY  
Saturday is the strongest day of the week

76%

OF ENTRIES THROUGH ONE ENTRANCE  
the second entrance carries the other 24%

2 peaks

AROUND 11 AM AND 3 TO 5 PM  
traffic before 7 am and after 9 pm is negligible

Age of visitors

estimated in bands, with error tolerance

COMPANY

70% alone, 25% in pairs, 4% in groups of 3+

ACCOMPANIED VISITS

60% are mixed couples and families

WITH CHILDREN

10.5% of weekend visits vs 7.6% on weekdays

05 · THE AUDIENCES

Behind the average visitor are eight audiences, each with its own style and rhythm.

FOR THE LANDLORD  
Sell audiences to advertisers, not footfall

FOR TENANTS  
Know the two personas that carry your store

06 · WHAT THEY LEAVE WITH

A third of visits end with a purchase in hand, and adult audiences carry out twice as often as teens.

32.1% of visits end with a clear purchase signal:  
a shopping bag, cart, basket, box or parcel

Share of visits ending with a purchase, by audience

How the purchase leaves the centre

What is in the readable bags

# Ask, don't build dashboards.

## Answers in plain language, for everyone on your team.

### MARKETING LEAD

✦ Which audience fills our Saturday afternoons?

› Plan the next activation around the audience that already comes.

### LEASING MANAGER

✦ Who comes through the side entrance, and what do they carry out?

› Bring audience evidence to the next lease conversation.

### CENTRE MANAGER

✦ On which days do parents with children arrive, and when?

› Staff and program for the families you actually get.

### No custom dashboards

Nothing to specify, build or maintain. Ask a question, get the answer and the chart.

### Integrates with anything

Clean data into your warehouse or BI tool via API, next to the mobile and card data you already buy.

### One interface for every centre

The same questions work across your whole portfolio.

# What it changes for you, and for every tenant in your centre.

### ● FOR THE LANDLORD

#### Price entrances, zones and screens by audience

In the case study, one entrance carried **76%** of all entries. Its audience is what an advertiser buys.

#### Program weekends for the audiences that grow

Sportswear and streetwear audiences grew by **+43%** and **+35%** on weekends, while professionals dropped **-34%**.

#### Bring audience evidence to leasing

Show a prospective tenant who already walks in, not just how many.

### ● FOR TENANTS

#### Staff around their audience's window

Morning seniors do half of their visits between **8 and 11 am**; teens peak between **3 and 6 pm**.

#### Tune assortment and campaigns to who walks past

Know the two personas that carry the store, and when they come.

#### A tenant service you can offer

Audience reporting as part of the value a centre gives its tenants.

One definition for every centre.  
Compare your portfolio like for like.

**Centre A**  
2 entrances

**Centre B**  
3 entrances + 1 tenant

**Centre C**  
2 entrances + 2 tenants

**Centre D**  
4 entrances

One interface, one set of definitions

 **Like-for-like comparison**

The same audience, time and purchase metrics in every centre. No reconciling legacy counters from different vendors.

 **Scale camera by camera**

Start with the main entrances. Add entrances or tenant storefronts where you need a sharper view.

 **Roll out in waves**

Centre by centre, in the order you choose, with a portfolio view from the second centre on.

# We understand every visitor without identifying anyone.

## No faces, no identities

No facial recognition and no biometric templates.  
Visits cannot be linked or re-identified.

## Aggregates only

Every output describes at least 25 people. No number  
ever points to an individual.

## Estimates, stated honestly

Age is estimated in bands with an error tolerance, and  
"unknown" is reported, never reallocated.

## Common areas only

Cameras cover entrances and common areas you  
control, never inside a tenant's store without the  
tenant.

## Your compliance process, supported

We work through your data processing agreement  
and impact assessment with your legal and GDPR  
teams.

## Independently audited

Our processing holds an independent audit  
certification, available on request.

All analysis runs without facial recognition or biometric templates. Visits cannot be linked or re-identified. All outputs are aggregated (minimum 25 persons per segment). Age estimation uses bands with error tolerances.

# Start with one centre. Grow into the future of mall audience analytics.

1

## Pilot

### ONE CENTRE

- Cameras at your main entrances
- AI chat and live dashboard from day one
- A report with your audiences, time patterns and purchase signal

2

## Compare centres

### A FEW CENTRES

- The same metrics side by side
- Ideally across a peak season
- Matched to your own segments and KPIs

3

## Portfolio rollout

### IN WAVES

- Entrances and tenant storefronts where you need them
- Data into your systems via API
- One view across the whole portfolio
