

Retail knows what sold. Nobody knows who buys.

We built the missing layer. This is how the business works, who pays for it, and exactly which companies are worth an hour.

What we actually sell

Not a screen, not a device, not a store. We sell a category read.

THE LICENSED SENTENCE

Syndicated data tells you what sold. We show you who buys it, in the aisle, receipt-verified.

- **450+ detectable visual attributes**, about 88 captured per shopper.
- **Matched to the receipt: 92%** of orders at our pilot store.
- No faces, no identities, no cross-visit tracking. Aggregated outputs only.
- **No substitute exists.** Counters count bodies. Shelf cameras watch shelves. Panels are recall.

The unit is the category read: built once, sold to every brand in that category. Store count is supply, never revenue.

Why we stopped selling screens

Same technology. Different customer.

- **The data was always the base.** To personalize anything, you first have to read who is standing there. That capture layer is what we actually built.
- **In-store media is a hard market.** Many stakeholders, long chains, slow decisions.
- **Retailers do not use in-store media to lift their own sales.** They use it to sell space to brands. In that model the retailer is a landlord, not a user.
- **So we were not solving any of their top three problems.** We were selling them a channel they resell.
- **Brands have a far bigger appetite for the data, and it scales better.** One retailer estate serves many brands.

WHAT DID NOT GET THROWN AWAY

Personalization and in-store media stay in the portfolio as an application layer and a partner channel. They are no longer the pitch.

One loop, three currencies

RIGHTS Retailers licence anonymous aggregates	DATA Their cameras, our software, at the edge	PROOF Matched to the receipt	REVENUE Brands buy the category read	PULL Paid brands make retailer no. 2 say yes
---	---	--	--	--

THE LOOP COMPOUNDS. PROOF IS REUSABLE ACROSS CHAINS, AND OUTBOUND TURNS INTO INBOUND.

MARKET	PAYS IN	GETS
Brands	Cash	The category read, as an annual seat
Retailers	Rights	Free platform, own-store insight, share of attributed revenue
Media operators, brokers	Distribution	The audience layer under their own product

Collect at 1, sell at 2 and 3, partner at 4.

1 collect (hard, the moat) · 2 insight · 3 actions · 4 execution (crowded, capital-heavy).

CHAPTER ONE

BRANDS

They pay in **cash**. This is the customer.

Three buyers, three budgets, three reasons

The one who loves it is rarely the one who signs. You need all three.

WHO	THEIR QUESTION	BUDGET
Trade marketing category, key account	Where do I sell, on what terms, how do I argue with the retailer	Trade marketing the biggest wallet
Insights P&G calls it CMK, Nestlé calls it Market Intelligence	Is the method sound, does it beat what I buy today	Research
Brand or marketing manager	Which segment moves, did the campaign work	Brand and media

Trade marketing pays. Insights vetoes. Never single-thread a brand.

Which brands are worth an hour

Not size. Not category. Five filters, applied in this order.

ALL FIVE ARE NON-NEGOTIABLE

01 A local pen

Can this legal entity sign about EUR 40k **without the signature leaving the country?** Owner-managed Czech or Slovak firms qualify, and so does a country GM who is personally a registered statutory officer.

FAILS IF THE BUDGET SITS IN WARSAW, BUCHAREST, VIENNA, BRATISLAVA OR BASEL

02 A wallet that makes EUR 40k trivial

Measured against **filed net profit, not revenue**. A big top line with thin margins prices at the floor and argues about every crown.

03 Physically on shelf in an estate we have

Or one we will have. A brand with no presence in our stores has nothing to buy.

04 Decides in weeks, not quarters

Weeks to three months is a live seat. Three to six months is next year's order. Slower than that is pipeline, not plan.

05 Sits in a category with depth

We need roughly five payable brands in a category for the read to syndicate. One buyer is a study. Three or more is a currency.

WHEN THE PEN IS UNKNOWN, ASK THIS. END OF THE MEETING, BEFORE ANY PRICE

"If you wanted to commission a Czech-only shopper study, roughly CZK 1m, from a new vendor, would that be your signature, or would it clear above Prague?"

The parent's nationality is not the filter. The budget's location is. Some Czech-owned companies fail this test, and some multinationals pass it.

CHAPTER TWO

RETAILERS

They pay in **rights**, never in cash.

Free platform, and a share of what we sell

- **They never pay cash.** They grant rights.
- They receive the platform free on their existing cameras, their own store insight from day one, an AI chatbot over their own traffic data, and a ready-to-sign compliance pack.
- **Revenue share is a real model, not a concession.** Up to 40% on retailer-attributed products. The frame is "we help you monetize your own audience", a business we build for them.
- **It is a founding data-partner term.** Once a category read exists, later chains in that category no longer need the share to make the deal work, and they do not get it.
- **Their footage and till data stay theirs.** Footage never leaves the store. What we hold is the anonymous aggregate, licensed to us, perpetual and non-exclusive.

WHY THEY SAY YES

The asymmetry inverted. Today their suppliers know their shopper better than they do, and that gap is used against them in every trade negotiation.

Which chains we want

START HERE

Do not count stores. A 90-store multibrand drugstore chain beats a 300-store own-brand chain.

FIVE FILTERS, ALL NON-NEGOTIABLE

01 Multibrand, not private label

High third-party SKU share is the whole point. We sell brands a read of their own shoppers, so if the shelf is mostly the retailer's own brands, there is nobody to sell to.

FAILS IF THE ASSORTMENT IS MAJORITY OWN-BRAND

02 Company-operated, with central IT

One signature covers the estate. Franchise means negotiating twice. A co-operative multiplies the cycle by the number of independent owners.

FAILS ON FRAGMENTED CO-OPS, HOWEVER BIG THE STORE COUNT LOOKS

03 Category breadth: how many reads it unlocks

This is where the value actually sits. Grocery **15 to 25** · drugstore and HPC **5 to 8** · petrol and convenience **2 to 4** · electro and sport **1 to 3** · pet specialty **1 to 2**.
Two 200-store chains can differ by an order of magnitude on this one line alone.

04 60 to 150 stores

The sweet spot: fast enough to decide, big enough to be statistically real. Under 30 is thin. Over 500 is a two-year procurement cycle.

05 A warm way in

Founder-led, mid-size, one person can say yes. Warm intro beats second degree beats cold, every time, and the gap is not small.

CHAPTER THREE

PARTNERS

They pay in **distribution**.

We are the layer under retail media

Not a competitor to it.

- **RMN and DOOH operators are already asked by their clients for audience proof** and cannot deliver it. We can, running on their own players and under their own site contracts. This is the NANOVO conversation.
- **Two different deals, never merged:** operator access (their estate, our measurement) and data distribution (a partner reselling the read).
- Brokers and insight agencies are distribution and optionality, not the core.

What it costs

LAYER	PRICE	WHAT IT IS
Study	150 to 500k CZK one-off	A single read. Not a subscription
Founding seat	floor EUR 40k	Year one, max 3 per category, discounted, density escrow
List	EUR 75 to 122k / yr	30 to 60 stores, one chain
Channel currency	EUR 122 to 327k / yr	150 to 300 stores, two or more chains

- **Public anchor:** a Czech state agency pays ACNielsen about 3.7M CZK a year for a monthly sell-out feed, and 230 to 240k CZK for one narrow category report.
- **Do not quote a price in a first meeting.** "That depends on the coverage you would need."

How we say it

AUDIENCE	WE ARE	THE LINE
Retailer	In-store data intelligence platform	"Full visibility into your own stores, free. In exchange you licence anonymous aggregates, and you see everything before any brand sees a masked version."
Brand	The measurement layer, the who-layer	"Syndicated data tells you what sold. We show you who buys it, in the aisle, receipt-verified."
Media or data partner	The missing layer	"You own what sold. We built who buys, matched to transactions."

Attached to any depth claim, always: no facial recognition, no biometric templates, no identities, aggregated outputs only.

Three things we do not bend

01

No exclusivity, ever

To a brand or a retailer. Syndication is the entire multiplier, and exclusivity turns a currency into a one-off study. The real scarcity is stronger anyway: three founding seats per category, one to two founding retailer slots.

02

Privacy by design is the moat

Not the constraint. No facial recognition, no biometric templates, no identities, no cross-visit tracking, aggregated outputs only. The compliant version of this can only be built the way we built it, and anyone arriving later has to solve that first.

03

Trading data stays theirs

We never ingest cost, margin, sell-through or elasticity, so we cannot leak them. What we help a retailer sell is their **audience**, never their trading terms. That distinction is what makes the rights conversation possible at all.

Chicken and egg

YOURS TO NAVIGATE. THERE IS NO RULE THAT SOLVES IT

- To sell a brand a specific retailer's data, we need that retailer's mandate.
- To get the mandate, it helps enormously to show brand demand.
- **Safe in any conversation:** the method, the privacy design, the shape of the product, the categories we are building.
- **Handle with care:** naming or implying a specific chain's data before its mandate is signed. If that trade looks worth making in a given room, make the call and tell us afterwards.

Where you plug in

01 Doors

The named person, and the reason they take the call. One right name beats ten names.

03 Posture

Two founders read as a startup. Add twenty years of CEE retail services and we read as a vendor a category director can buy from without career risk.

02 Budget cartography

Which budget funds this, whose signature clears it, what band, and when their planning cycle runs. This is the answer we are missing most.

04 Your 2022 experience

You already tried to sell offline retail analytics into Czech retail. Who bought, who blocked, at what price, in which job title. That debrief is worth more to us than an introduction.

Brand budgets for next year lock in October and November. First contact has to happen in September.

A brand not already in conversation by then is buying out of a locked budget, which usually means waiting a full cycle. The next few weeks matter more than the following six months.
