

Leaving with a bag

Brand-detector scored on visitors walking away from the concourse camera (facing-ratio <0.28), stratified by day-of-week, n=7,000, seed 42. Signal = a carried shopping bag, trolley, basket, box or parcel — not a worn personal bag.

32.1% of exiting visitors sampled carry a clear purchase signal

2,248 of 7,000 · 0 scoring failures

BY DAY OF WEEK

Monday	33.3% (275)
Tuesday	30.6% (237)
Wednesday	34.2% (378)
Thursday	31.0% (341)
Friday	31.8% (404)
Saturday	32.2% (323)
Sunday	31.3% (290)
overall average (32.1%)	

WHAT'S IN THE SIGNAL

ITEM TYPE	N
shopping_trolley	758
plastic_bag	587
paper_bag	456
shopping_bag	238
box	235
shopping_basket	32
parcel	15
other (<10 each)	39

tesco · 4 dm · 4 rossmann · 4
billa · 3 pepco · 3

Legible logo/wordmark only — most bags carry no readable brand.

CROSS-CHECK VS. BRAND-DETECTOR'S OWN VISIT-PURPOSE READ

SHOPPING_MISSION	N	SIGNAL RATE
stock_up	555	96.9%

top_up	40	82.5%
browsing	363	73.3%
unclear	4	25.0%
passing_through	5,799	23.7%
immediate_consumption	174	17.2%
service_only	65	10.8%

Two independent reads (carried-item detection vs. inferred visit purpose) agree strongly — stock_up/top_up/browsing sessions carry a bag far more often than passing_through. Not itself the point of this report, but a sign the underlying signal is real.

Method. Population: not staff, valid visit ($\geq 2s$, >10 judged frames), facing-camera ratio <0.28 , has stored photo — 98,305 sessions. Sampled 7,000, stratified by day-of-week proportional to that population, seed 42. Scored via brand-extractor's Detection schema (same model/prompt as the 75,609-visitor entering-side run). "Purchase signal" = any carried_items[] entry typed as a shopping bag/trolley/basket/box/parcel — excludes worn bags (backpack, handbag, crossbody — those are garments[] , brought in, not evidence of a purchase) and personal-style held bags (tote, shoulder bag, clutch, duffel). Heuristic, not a closed enum — see ops/cpi-brand-score-leaving/ for raw results and full methodology.
